

Digital Age Leadership

HOW CAN EDUCATIONAL LEADERS KEEP UP WITH THE EVER EXPANDING LANDSCAPE OF TECHNOLOGY AND INFORMATION?

School and district leaders have to take personal responsibility for understanding changes in technology and how it affects teaching and learning. Today's school leaders must move their schools into the digital age. Chalkable's model for building digital age leaders is created by:

- Mentoring to support each participant, school, district member individually and as a group;
- Providing future-focused tools used to support a transformative implementation;
- Embedding cutting-edge, standards-based resources, tools and implementation strategies.

Chalkable instructional coaches work with school leaders to individually assess their own strengths and weaknesses. Through blended professional development activities that include face-to-face, on-line and reflective analysis, participants develop their own target professional growth chart to achieve digital-age leadership skills.

"It is time for educational leaders to embody a modern, progressive form of leadership."

Eric Shenerger
