

Digital Citizenship

ARE YOUR STUDENTS PREPARED TO BE PART OF THE DIGITAL REVOLUTION - SAFELY?

Digital citizenship has a central place in teaching curricula. It is through educating kids on the appropriate ways to use, navigate, interact, create and share web content that they develop the skills necessary for thriving in a knowledge economy.

Digital citizenship isn't only about dealing with online tools, but also about building safe spaces and communities, understanding how to manage personal information, and about being internet-savvy.

Infusing Digital Citizenship skills must be part of every day instruction in the classroom. Using Chalkable Scope and Sequence through STI's professional learning, teachers walk away with a clear understanding of how to weave these skills and topics into daily instruction.

Digital Citizenship is a complex topic with many facets. Our goal is to make sure we help teachers and students understand the issues that might occur online while also stressing the positive impact of technology. As many educators know, most students want to do the right thing - and will, if they know what that is.

Teacher & Administrator Professional Learning Topics:

- Safety & Security
- Privacy
- Literacy
